

# **A TOAST TO QUALITY**

**from the hardest workers a vineyard can buy**

## **Solid & Vented Harvest Bins**

- 600 Litre capacity reduces weight pressing down on grapes limiting the risk of skins bursting to release juice, jeopardising wine quality through oxidation
- Rupturing and release of juice is almost inevitable with thin skin grape varieties. Horen bins have four drainage taps to get rid of juice before oxidation occurs. These also contribute to faster, easier and more hygienic cleaning
- The vented Horen bin keeps grapes cool – a real benefit when transporting full bins some distance to contract winemakers. Where cool storage may be required, vents promote faster, more thorough and controlled cooling
- UV resistance, low maintenance, light weight, high strength, food grade HDPE plastic, recyclable, washable, four-way forklift entry and three skids are just a few reasons to put Horen bins to work in your vineyard
